

Kabon.Africa

Restore Africa. Earn Carbon Credits.

Expression of Interest · June 2026

Wambugu Kamotho, Founder · [kabon.africa](#) · [\[email\]](#) · [\[phone\]](#) · [\[city, country\]](#)

Indigenous forest restoration — one of the ecosystem types onboarded on Kabon.Africa.

Executive Summary

Kabon.Africa is a digital carbon-credit marketplace and verification platform that connects African communities restoring degraded land and deploying clean energy with global carbon-credit buyers. We have designed, built, and deployed a complete, live platform — web and mobile apps, blockchain-based credit issuance, and satellite- and IoT-driven monitoring — and are now seeking *[non-dilutive grant / pre-seed investment of US\$XXX,000]* to onboard our first cohort of verified projects and convert a working product into live, high-integrity carbon transactions.

The Problem

Africa holds an outsized share of the world’s nature-based carbon potential, yet captures only a small fraction of global carbon finance *[insert current statistic + source]*. The communities and local developers best placed to restore forests, savannas, grasslands and to deploy clean energy are largely locked out of the carbon market because:

- **Verification is costly and opaque** — traditional MRV (measurement, reporting, verification) is slow and unaffordable at community scale.
- **Intermediaries capture the value** — by the time credits reach buyers, little revenue returns to the people doing the restoration.
- **Buyers can’t trust quality** — weak traceability fuels greenwashing concerns and depresses demand for African credits.

Our Solution

Kabon.Africa is a transparent, technology-driven marketplace that:

- **Onboards** African land-restoration and clean-energy projects through a simple web and mobile workflow.
- **Verifies** them with satellite vegetation analysis (NDVI via Copernicus), IoT sensor data, and a structured maker–checker verification process.
- **Issues** tokenized carbon credits on-chain — traceable and tamper-evident — with formal retirement certificates.
- **Connects** projects directly to global buyers, returning a far larger share of value to communities.

Why Now

- Rapid growth in voluntary carbon markets and momentum behind the Africa Carbon Markets Initiative (ACMI).
- Surging buyer demand for *high-integrity, traceable, nature-based* credits with credible MRV.
- The convergence of mobile, satellite, and blockchain finally makes low-cost, trustworthy verification feasible at community scale.

Product & Technology — built and live

Unlike most early ventures, Kabon.Africa is not a concept — it is a deployed product. The live platform ([kabon.africa](#)) includes:

- Carbon-credit **marketplace** & project registry
- Satellite (NDVI) + **IoT-based MRV** — our core moat

- **Verification** workflow + retirement certificates
- **Mobile app** for field project owners
- **On-chain** tokenized credits (Polygon) + IPFS records
- Admin, analytics, and partner tooling

Land restoration and clean-energy project types across the platform.

The platform currently models **56 demonstration projects across 43 African countries**, exercising the full lifecycle from onboarding to verification to credit retirement.

Status & Traction

- **Product:** full stack deployed and operating end-to-end (web, mobile, microservices, on-chain rails).
- **Stage:** pre-revenue beta; verification and marketplace flows working with a complete demonstration dataset.
- **Next milestone:** onboard the first *[N]* real verified projects and execute first credit sales. *[Add any LOIs, pilot partners, or community agreements here — these are powerful.]*

Business Model

- Transaction fee on each carbon-credit sale (marketplace take-rate).
- Verification / onboarding services and partner royalty share.
- Revenue scales directly with the volume of verified credits transacted.

Team

Wambugu Kamotho — Founder. A rare cross-disciplinary fit for this problem: a background in documentary and NGO storytelling (community trust and narrative), commodity logistics (supply chains and offtake), and IoT leadership (Director at Bandika) — the foundation of our satellite/IoT verification edge. *[Add co-founders, key hires, and advisors — investors weight team heavily.]*

The Ask & Use of Funds

We are seeking *[US\$XXX,000 in grant / pre-seed]*, deployed against:

- Onboarding and verifying the first real project cohort
- MRV / verification engineering (satellite + IoT)
- Buyer and community/partner business development
- Standards alignment and *[registration / legal / incorporation: insert status]*

Vision & Impact

Kabon.Africa exists to route global carbon finance to African communities at the source — restoring ecosystems, displacing emissions, and building the trusted digital rails for Africa’s carbon economy. Our goal over *[timeframe]* is to restore *[X hectares]*, avoid or remove *[Y tCO₂e]*, and channel verified income to *[Z]* households across the continent.

Kabon.Africa · *[legal entity name, if incorporated]* · kabon.africa · *[email]* · Confidential — prepared for *[Investor / Programme name]*.
